Q: NSMutableArray accessing This is my problem, I have some object called "animal", and inside that object I have a NSMutableArray of "String" objects called "animals". I have a method that prints out the animals object, and I call it in a for loop. My issue is that when I call [animals objectAtIndex:0] it returns me a null. Here is my object:

```
@interface Animal : NSObject {
    NSMutableArray *animals;
}
@property
(nonatomic, retain) NSMutableArray
*animals;
- (void) printAnimals;
@end

@implementation Animal
@synthesize
```

animals; - (void) printAnimals { for (NSString *string in animals) { NSLog(@"%@", string); } } - (void) dealloc { [animals release]; [super dealloc]; } @end And then I instantiate it and store it in an array of Animals

```
NSMutableArray *animals =  
[[[NSMutableArray alloc] init] autorelease];  
Animal *a = [[Animal alloc] init]; [animals  
addObject:a]; Then I call the method to print it  
[a printAnimals]; I am not sure what I am  
doing wrong here? A: AFAIK, -objectAtIndex:  
calls [array objectAtIndex:index] (or  
something similar). It will return null if the  
array does not contain an object at the index.  
You have created an array of Animals (you are  
setting its class to Animal), but there are no  
Animals in your array (there is only an  
NSMutableArray). I would think you need to  
create a single animal: Animal *a = [[Animal  
alloc] init]; [animals add
```
