It is free and open source software (GPL) and can be downloaded from [www.x-plane.com](http://www.x-plane.com). It also runs on Windows, Linux, Mac OS, and other platforms. X-Plane 11 includes a flight planning tool, a fully functional flight simulation engine, a huge database of official and unofficial airports, and realistic scenery. Features include:

- Flight Planning: The new flight planning tool lets you design your own flight paths. You can drag, drop, and drop the planned path to a map of the world, track it on the map, and record the path you created. •

### What's New in the?

Random Name Generator Software is a lightweight Windows application whose purpose is to help you generate first and last names randomly. The layout is intuitive enough to be configured without having to consult a help manual or watch online tutorials. The program gives you the possibility to create random names from a preset list or load the first and last names from a plain text file. Additionally, you are allowed to input the names directly into the primary panel. What's more, Random Name Generator Software lets you specify the number of names that you want to create, and if you opt for the preset list with names

---

provided by the tool, you are allowed to pick the gender (male or female). Last but not list, you can export the generated information to XLS or plain text file format, and clear the entire workspace with just one click. Since it doesn't require much computer knowledge to set up the dedicated parameters, even rookies can master the entire process with just a few clicks. During our testing we have noticed that Random Name Generator Software carries out a task very quickly, and no errors showed up throughout the entire process. It doesn't stress up the CPU and memory, so the overall performance of the computer is not hampered. As a conclusion, Random Name Generator Software offers a simple yet efficient software solution when it comes to helping you build a list with first and last names in a random order. It can be easily installed and configured by all types of users, regardless of their experience level. Publisher Description Generate random names from a preset list or load the first and last names from a plain text file. Input the names directly into the primary panel, or choose the gender (male or female). In addition, you can specify the number of names you want to generate. The randomly generated names are saved to a file, and you can view the information using the XLS or plain text file format. All the information can be cleared by just clicking on the button, and you can also generate random names in a different list at any time. Many people have an idea of what to say, but they simply do not know how to say it. This is what is meant by "speech-technology". Now you will not have to worry about giving a boring speech anymore. For example, you will not have to stress about the fact that you are unable to use the right tone of voice or any other problem. Now you can easily display your ideas, thoughts, and ideas in an organized, professional, and pleasant way. The software that we have prepared for you today will really show you the meaning of speech-technology. You will see for yourself how easy it is to use the program, regardless of your level of computer experience. And what's more, this program works with Windows 7 and Windows 8. You will no longer need to waste a lot

---
