webcow is a small and handy tool to get the links out of directory listings or webpages. It was first created to get all files of an Apache* directory listing. Within the development, I was asked for publishing and improvements, some errorfixing options and file-filters were added. Today webcow is a swiss army knife for web-based downloads. Next to its own downloader it supports all major download apps. You can even use it to sort textfiles or process them in some way. WebCow allows you to apply sorting and filtering, then downloads them. You can use it to extract web pages (.html), images, MP3 files, Zip files etc. and quickly save them to a folder. The downloaded files can also be automatically renamed to include the full server path of the originating site. Extracted links can be saved as file lists for later use. Webcow also offers a "Light and Leech" feature that allows you to highlight an area of a page and get all the links that are within the highlighted area. Requirements: · Visual Basic 6.0 Runtime What's New in This Release: · New: Multiselect is now working. Ctrl+A will select all, Ctrl+Shift+I inverts the selection. Del will delete the selection. · Fix: Cut-Operations Hotkeys (Ctrl+X and Ctrl+Alt+X) now work. · Fix: Re-Routes / Download: Base was not applied the right way under some circumstances. This should be fixed now. (Bug since 0.53.0032) · Fix: Free Download Manager Re-Route: FDM opened each time webcow started. webcow Description: webcow is a small and handy tool to get the links out of directory listings or webpages. What's New In Webcow?

· Webcow is a very easy-to-use tool that allows you to download all files and links from an Apache* directory listing, or just any webpage. · Webcow supports all popular downloads-programms with the possibility to pre-select or to pre-filter the results. · You can easily extract files from an html-page by highlighting an area of a web page and afterwards pressing F7. · WebCow supports all options that are offered by the "Extract as HTML-page"-option in Internet Explorer, and can now even extract files from them. · WebCow now supports folders and sub-folders. · Information, such as website address and the filename of the extracted files, can be included in the file name. · You can specify files, folders and sub-folders as "exclude" (leave untransferred). · Webcow allows you to apply sorting and filtering, then downloads them. You can use it to extract web pages (.html), images, MP3 files, Zip files etc. and quickly save them to a folder. The downloaded files can also be automatically renamed to include the full server path of the originating site. · Extracted links can be saved as file lists for later use. Webcow also offers a "Light and Leech" feature that allows you to highlight an area of a page and get all the links that are within the highlighted area. · The last 3 results can be added to an internal search-table for easy search in the future. · You can specify multiple URLs in one line of text, to be shown as file list. · You can also specify a "sortlist" that allows you to filter the files in a certain way. · Depending on your settings, you can include more than one "sortlist". · You can specify up to 4 different "extract"-options. · The "light and leech"-feature will highlight the link

you have chosen and create a file-list, with download links to all the files that can be found within the highlighted area. · When you doubleclick a file, webcow will download and open the file. · You can preview the file before downloading. · Internet Explorer is not supported anymore. · A desktop version is available for win98/2000/XP/Vista with the vista version. The desktop version includes the bigger interface, greater speed and has a file filter. · The.html
