What's new in this version: This update improves performance for better iPad 2 ePub to PC transfer. The impact of obesity on death rate and disability of life in older adults with type 2 diabetes mellitus in China. The rising prevalence of diabetes is accompanied by an aging population in China. As diabetes may lead to many adverse consequences such as disabilities and death, it has become a major health and social problem in China. But the impact of obesity on diabetic complications in the older population has rarely been reported. To evaluate the impact of obesity on diabetic complications in the older population, we analyzed data from the Chinese Diabetes Mellitus Cohort Study. This study was a large population-based cohort study carried out in China. Over 7000 individuals aged 50 years and above were recruited from the urban and rural areas in China in 2000-2001. A total of 1514 participants were identified as having type 2 diabetes according to the 1999 WHO criteria. The outcome measures were 3-year case fatality and 30-day case-fatality rate, which were analyzed by Cox proportional hazards model. The prevalence of obesity, defined as BMI  $\geq 30$  kg/m<sup>2</sup>, was 33.8% in participants with diabetes. After controlling for potential confounding factors, obesity was associated with a 2.06-fold increased risk of 3-year mortality rate and a 2.02-fold higher risk of 30-day case-fatality rate. When BMI  $\geq 28$  kg/m<sup>2</sup> was used to define obesity, the adjusted risk of both 3-year mortality rate and 30-day case-fatality rate increased by 1.48-fold and 1.32-fold, respectively. These associations were stronger in men than in women. Obesity is an independent risk factor for increased 3-year mortality rate and 30-

## What's New in the Tipard iPad 2 Transfer For EPub?
