Making the grade: Creative filters Photoshop's Creative filters are like the light and airy filters found on filter apps such as VSCO Cam.

These filters add special effects to an image, adjusting the colors, light, or contrast for a particular

look. You can add filters to all the standard color- or black-and-white-only file types, or you can apply them to files that use layers (add a layer, as described in Chapter 11, and then make a mask and apply a filter to that mask). The creative filters are organized in several categories: Color, Black & White, Tone, and Shadows & Highlights. ##

Article content The battle between the Leona Geoffrion Foundation and the B.C. Human Rights Tribunal for the right to be heard in court is entering its final phase. The tribunal is expected to decide whether to authorize its lawyers for the women who filed the suit at its April 19, 2014, hearing in Vancouver. We

Try refreshing your browser, or Struggle for the right to be heard in court described as 'scorched earth' Back to video On Tuesday, Geoffrion's lawyer, Barry Leitch, submitted written arguments that the women's initiative to launch a human rights complaint on their behalf has been "a campaign

for publicity and a ‘scorched earth’ litigation strategy,” showing no interest in settling the matter. Leitch is asking the tribunal to find his clients had no legal right to be heard as they failed to meet the administrative conditions required to initiate the complaint and any hearing. “The process with which they attempted to bring this complaint to the tribunal was neither in

accordance with their own constitution, nor with any laws to which they were subject,” Leitch said, adding that Geoffrion had been attempting to sabotage the tribunal’s efforts to “bring fairness to the situation.” Reactors such as those described in, for example, US-A1-20020171521 and WO-A1-2002024491, are typically gas-tight. In the

interest of safety, it is desirable to be able to test the integrity of the reactor. For this purpose, it is known to provide a reactor with a number of ventilation openings, to which the gas flow from a gas filling line is directed. In the known reactors, the ventilation openings are provided in a manifold which connects a tube system to the central reactor body. This tube

system includes a number of perforated tubes which lead from an upper part of the reactor to the manifold and from the manifold to a lower part of the reactor. During construction, these tubes are first heated in a tubular heating arrangement, and then expanded (expanded tubes) or welded (welded tubes). The tubes may be welded at their ends, or merely at their top end.

After the tubes are expanded (and in the case of welded tubes, at least partially welded
