Using Photoshop to create. Some photographers use Photoshop as the only tool to create images. They use layers to start with an image, perform their edits, and finish the image with layers. This method requires a lot of practice to get to know the intricacies of the application. For example, if you're planning to do a lot of digital painting, learning how to create your own brushes is an essential skill. Photoshop's brush creation and manipulation tools are another of its many features, and after some experience, you can create your own brushes easily. **Using Photoshop to alter**. Some photographers use Photoshop as a post-processing tool to fine-tune their images. By using different tools, you can perform simple color corrections (like changing the saturation of a picture), crop images, and resize images to give them a tighter look, or to enlarge them for printing. You can also use complex editing techniques to give images a special "look" or to turn a stock photo into something interesting and totally your own. **Using Photoshop as a research tool**. Some photographers use Photoshop to look up different photos they want to use for a project. They find images online or on someone else's computer. They like the image and then add it to a new project, replacing the original image. This is a more time-consuming method than working from a stock photo. It also requires a lot of patience, but the results can be very nice. **Using Photoshop as a web-building tool**. Most photographers out there should be using either Adobe Elements or InDesign, or both, to build their websites or magazine layouts. Many photographers use Photoshop, too, to build sites for themselves. They do layouts by hand using a graphics program like Adobe Photoshop and add CSS graphics and code to them. You can download and install the latest version of Photoshop Elements at www.adobe.com/products/photoshopel/. Some photographers prefer to use Adobe Photoshop when creating websites, as it contains many web-building tools that aren't in Elements. **Using Photoshop for any other reason**. Most photographers should be using a program like Adobe Elements or InDesign for all their graphic and layout work. Photoshop should be used for any additional editing or manipulation that a photo requires. ## Licensing for Importing Stock Images Photoshop is an incredibly

Layer Masks are also a great tool in Photoshop, providing a quick and easy way to edit objects in layers. All layer masks are visible in the Layers panel. The following text will provide you with a quick run-through of many of the Photoshop features. * * * The panel There are three main panels in Photoshop: the workspace, the Layers panel, and the Toolbox. The workspace is where your image is located. It can be placed anywhere on the computer screen. You can drag an image to the workspace or click the **Preview** button to open it directly from your computer. You can also access or hide the workspace by clicking the **Workspace** button at the bottom of the screen. This button is located to the left of the **File** menu. The Layers panel and Toolbox are located below the workspace. * * * The Layers panel The Layers panel contains all the layers in your image. You can add, copy, or move them. You can also work with the selection tool to create new layers or erase selections. To add a new layer to an image, click the plus button (red arrow) or drag an image onto the Layers panel. To delete a layer, click the minus button (red arrow) or drag an image on the Layers panel. The layers can be grouped together into a single layer group, creating a layer group. You can set the layer group as the current layer. You can also set layer groups as the foreground or background layer. If you want to group multiple layers together, you can select the layers. Click the **Add Layer Group** button to create a group and select the layers in the group. The layers can be modified using one of the various tools provided by Photoshop. You can use the Rectangular or Elliptical selection tool to select objects in the image and cut and paste them. To select an object: - Click the **Rectangle Selection** or **Ellipse Selection** tool. - Hold down the Alt key to select multiple objects in the image (red arrows). - Click on an area inside the selection box to cut the selected objects from the image (red arrow). - Click and drag the selection box to place the selection at the desired location (red arrow). - Click **Edit** to erase the selection

Brad Pitt has opened up about his opinion of the American film industry. The actor has not given a press interview for several years, but told Entertainment Weekly in a new interview that he finds Hollywood's current political climate "...deeply troubling". The actor, 56, said: "Our industry is really, not a great example... it is deeply troubling to me. "When I hear the way they're talking about each other in this country right now, it's deeply troubling." The actor has had his share of bad experiences with Hollywood's studios, with a lawyer's letter demanding he remove the film "Logan Lucky" from his upcoming filmography alleging it used "snippets" from the script of "The Hateful Eight". The film was subsequently removed from the release schedule. Pitt told the magazine that he had not developed much respect for studios after being unable to get approval from a notoriously conservative Hollywood studio to shoot on location in Louisiana. The actor, who has made dozens of movies since the early 1980s, admitted he had always wanted to make "Apocalypse Now", the movie he appeared in with Martin Sheen and Robert Duvall in 1980. But before he could make the movie, tragedy struck. In 1979, a plane carrying Pitt and two of his friends crashed in the hills of Big Sur, California. The tragedy killed everyone on board. Pitt told Entertainment Weekly: "I'd always wondered about making 'Apocalypse Now'. It's been on my list of things I've been dying to do. "But after my accident [on the set of TV series 'Trees Lounge' in New Orleans in 1978] I became... somewhat paralyzed. All I could do was talk about it. "Then when I was on location in Louisiana, they kept telling me it was impossible to make the movie there. That it was impossible to make it anywhere. "It was a political decision by an executive. It wasn't my idea. It was theirs. And it was the wrong one. "It meant nothing to me that day. I didn't care. But I care now. Because I'd like to see this country get back to being the place where we can
