many different methods to edit photos. The process itself can be a bit difficult to grasp because of its complexity. However, Photoshop by itself is a powerful photo editor. It allows users to change colors, adjust brightness or saturation, crop, rotate or sharpen an image, add a vignette, unsharp mask, levels, sharpen, add a black-and-white effect, apply adjustments to color, create images from scratch, combine different images and apply various filters, among other things. The Photoshop interface is very well organized. You can always find the features you need in the “Actions” panel. Some of the commands are grouped by category

---

like “Create” or “Edit”. The “Help” button displays help information in the form of short instructions with examples. You can also find the “Keyboard Shortcuts” on the “File” menu. They help you to perform certain actions by using only your keyboard and without opening Photoshop. In this article, we will explain how to use the main features of Photoshop, specifically the different tools and the main panels. We will start with the first panel, then the toolbars, the menus and the panels. How to Use Photoshop In this section we’ll explain the different features of Photoshop, how to use them and what their functions are. 1. Photo

Editors Panel The primary panel is the “Photoshop Editor”. It’s where the tools, selection tools and basic controls are. You will have access to all of the major Photoshop commands in the editor. In the Photo Editors panel, click on the “Window” tab. Here you will find a list of your Photoshop tools, like the “Hue/Saturation” tool. Below the list, you will find the tools available in the panel. Click on the “Select” tool to open it. Select Tool: Create a selection, draw a freehand selection, create a clipping mask, copy and paste, create selection outline, navigate a selection and more. Here are the main tools in the panel. You can

1. Select the Clone Stamp tool from the toolbox. 2. Click on an area of the image you want to copy. This action is often performed in a duplicate layer by selecting the Clone Stamp tool and choosing "Make a copy". Then you can edit and retouch the image. 3. Click the Tool Options icon. The Clone Stamp dialog box will appear and you can customize the settings for the tool as desired. 4. Click OK to save the settings. The Pixel placement mode will help you determine how the new area of the image is placed on the image. 5. Click the square next to the sample
